STIC-Biotech/ChemLib Sequence search of Application No. 10/600,645

Please do a standard search on:

(i).SEQ ID NO: 2 against both commercial and interference amino acid databases;

(ii). SEQ ID NO: 1 and 2 against both commercial and interference nucleic acid databases.

Thank you very much!

Ruixiang Li **GAU 1646 REM 4D75** Mail Box 4C70 (571) 272-0875

Search Notes

Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (uniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

Published Applications Database - November 2005

Published_Applications Nucleic Acid and Published_Applications Amino Acid database searches now generate two sets of results each. The Published_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published_Applications_New databases; older published applications make up the Published_Applications Main databases.

Searches run against Nucleic Acid Published_Applications produce two sets of results, with the extensions .rnpbm (Published_Applications_NA_New).

Searches run against Amino Acid Published_Applications produce two sets of results, with the extensions .rapbm (Published_Applications_AA_New).

Published_Applications_AA_New).

kinase receptors may be used in compositions to inhibit the effects of BMP's such as BMP 2 and BMP-4. The truncated receptors pref. comprise the ligand binding domain, but not the serine/threonine kinase and transmembrane domains. The truncated proteins are soluble and will be excreted into supernatant by recombinant mammalian cells expressing them. Such cells can be delivered in a medium or matrix which partially impedes their mobility, thereby localising the cells to a site of bone or cartilage injury.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     invention can be used for treating osteopenia, osteoporosis, fractures and other disorders related to low bone mineral content and density. As such, these compositions improve bone mineralization and can be described as TGF-beta antagonists and/ or BMP-antagonists. This polynucleotide is a bone morphogenetic protein receptor type I DNA sequence given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         149
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      111
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            171

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                231
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to a novel antibody or antigen-binding fragment that binds specifically to a sclerostin (SOST) polypeptide and impairs formation of a sclerostin homodimer. Specifically, it refers to an antibody that competitively inhibits binding of the sclerostin polypeptide to a bone morphogenic protein (BMP) Type I receptor binding site. The present invention describes a hybridoma cell capable of producing the antibody and a host cell for antibody expression. Furthermore, it provides a nucleic acid molecule encoding a transforming growth feator beta (FQF-beta) binding protein known as SOST (and also BEER) and methods for detection thereof Accordingly, such antibodies and osteopathic compositions of the

The invention relates to a novel isolated antibody, or its antigenbinding fragment, which binds specifically to a sclerostin (SOST)

CC binding fragment, which binds specifically to a sclerostin (SOST)

CC polypeptide. The SOST polypeptide comprises any of 6 sequences having 190

or 213 amino acids, fully defined in the specification (ADX97341,

ADX97360, ADX97398, ADX97400, ADX97402 or ADX97408) The antibody

CC competitively inhibite binding of the SOST polypeptide to a bone

morphogenic protein (BMP) Type I Receptor binding site and a BMP Type II

Receptor binding site, where the BMP Type I Receptor binding site is

C capable of binding to a BMP Type I Receptor binding site is

C capable of binding to a BMP Type I Receptor binding site is

C capable of standing to a BMP Type I Receptor binding site is

C capable of standing to a BMP Type I Receptor polypeptide. The invention

C turther comprising the new antibody, or its antigen-binding fragment, and a

C physiological carrier; an immunogen comprising a peptide comprising 6, 7,

B, 9, 10, 11, 12, or at least 21-50 or 20-75 consecutive amino acids of

the SOST polypeptide, methods for producing an antibody that specifically

CC that impairs binding Growth Factor (TGF)-beta signaling pathway,

that modulates a Transforming Growth Factor (TGF)-beta signaling pathway,

CC that impairs binding of a BMP to the SOST polypeptide, that impairs SOST

c antibody and compositions have osteopathic activity. The SOST nucleic

c and increasing bone mineralization, which may treat or prevent diseases

C for increasing bone mineralization, which may treat or prevent diseases

C conditions associated with low bone mineral density, such as

C represents a rat bone morphogenic protein type I receptor encoding DNA of

the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               149
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           209
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       269
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        329
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    389
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   449

This invention relates to a novel antibody or antigen-binding fragment that binds specifically to a sclerostin (503T) polypeptide and impairs formation of a sclerostin homodimer. Specifically, it refers to an antibody that competitively inhibits binding of the sclerostin polypeptide to a bone morphogenic protein (BMP) Type I receptor binding site or a BMP Type II receptor binding site or a BMP Type II receptor binding site. The present invention describes a hybridoma cell capable of producing the antibody and a host cell for antibody expression. Furthermore, it provides a nucleic acid molecule encoding a transforming growth factor-beta (TGF-beta) binding protein known as SOST (and also BERN) and methods for detection thereof. Accordingly, such antibodies and osteopathic compositions of the invention can be used for treating osteopeneia, osteoporosis, fractures and other disorders related to low bone mineral content and density. We such, these compositions improve bone mineralization and can be described
                                                                                                                                                                                                                                                                                                                                                                   receptor; bone morphogenetic protein; bone injury; antibody production; TGF beta antagonist; BMP-antagonist; osteopathic; osteopenias; osteoporosis; gene; ds.

that binds specifically to a sclerosin. GOST) polypeptide and impairs formation of a sclerostin homodimer. Specifically, it refers to an antibody that competitively inhibits binding of the sclerostin competitively inhibits binding of the sclerostin or polypeptide to a bone morphogenic protein (BMP) Type I receptor binding site or a BMP Type II receptor binding site. The present invention describes a hybridoma cell capable of producing the antibody and a host cell for antibody expression. Furthermore, it provides a nucleic acid molecule encoding a transforming growth factor-beta (TGF-beta) binding protein known as SOST (and also BERN) and methods for detection thereof. Accordingly, such antibodies and osteopathic compositions of the cinvention can be used for treating osteopenia, osteoprosels, fractures and other disorders related to low bone mineral content and density. As such, these compositions improve bone mineralization and can be described to low the state of the low of low of the low of the low of low of the low of lo invention relates to a novel antibody or antigen-binding fragment New antibody or antigen-binding fragment that binds specifically to sclerostin polypeptide and which inhibits binding of sclerostin polypeptide to a bone morphogenic protein, useful for increasing bone mineral content or density. bone morphogenetic protein receptor type 1 DNA sequence given in an exemplification of the invention. polypeptide. The SOST polypeptide comprises any of 6 sequences having 190 or 213 amino acids, fully defined in the specification (ADX97341, CC ADX97360, ADX97360, ADX97400, ADX97408). The antibody competitively inhibits binding of the SOST polypeptide to a bone competitively inhibits binding of the SOST polypeptide to a bone competitively inhibits binding of the SOST polypeptide of a bone steep to binding site, where the BWP Type I Receptor binding site is capable of binding to a BMP Type I Receptor bolypeptide. The invention cutrier comprising the new antibody, a composition of further comprising the new antibody, a nost comprising the new antibody, or its antigen-binding fragment, and a composition comprising the new antibody, or its antigen-binding fragment, and a physiological carrier; an immunogen comprising a peptide comprising 6, 7, 8, 9, 10, 11, 12, or at least 21-50 or 20-75 consecutive amino acids of the SOST polypeptide; and methods for identifying an antibody that specifically compositions are the SOST polypeptide; and methods for identifying an antibody that impairs binding of a BMP to the SOST polypeptide, that impairs SOST compositions have osteopathic activity. The SOST nucleic acids may be used in gene therapy. The composition and methods are useful correctsing bone mineralization, which may treat or prevent diseases or conditions associated with low bone mineral density, such as correcting an art bone morphogenic protein type I receptor encoding DNA of the composition and protein type I receptor encoding DNA of 629 149 209 269 389 449 509 569 689 254 314 329 614 674 734 794 374 434 494 554 89 CAAGGATTCACCAAAAGCCCAGCTACGCAGGACAATAGAATGTTGTTGTCGGACCAATTTGTG AGCACCAGAGGACACCTTACCTTTCTAAAATGCTATTGCTCAGGACACTGCCCAGATGA CGCTATTAATAACACATGCATAACTAATGGCCATTGCTTTGCCATTATAGAAGAAGATGA rcaeceaeaaaccacerraacrrcreegrerareaagrareaaegcrerearrircaare CAACCAATATTTGCAGCCTACACTGCCCCTGTCGTTATAGGCCCATTCTTTGATGGCAG CAACCAATATTTGCAGCCTACACTGCCCCTGTCGTTATAGGCCCATTCTTGATGGCAG CGTCCGATGGCTGGCTGTCCATCTCTATGGCTGTCTGTATTGTCGCCATGATCGTCTT CTCCAGCTGCTTCTGTTACAAACATTACTGTAAGAGTATCTCAAGCAGAGGTCGTTACAA CTCCAGCTGCTTCTGTTACAAACATTACTGTAAGAGTATCTCAAGCAGAGGGTCGTTACAA TGGCCCGGACAGGACACGTGCGAATTGGACAATGACTCAGCTATACACTTACATT ACTGGGAGCCTGTCTCATCATTTCTCATGTTCAAGGGCAGAATCTAGATAGTATGCT ACTGGGAGCCTGTCTGTTCATTTCTCATGTTCAAGGGCAGAATCTAGATGGTATGCT CCATGGTACTGGTATGAAATCAGACGTGGACCAGAAGAAGCCGGAAAATGGAGTGACGTT TCAGGGAGAAACCACGTTAACTTCTGGGTGTATGAAGTATGAAGGCTCTGATTTTCAATG CAAGGATTCACCAAAAGCCCAGCTACGCAGGACAATAGAATGTTGTCGGACCAATTTGTG 30 TGCGGCCGCCAGGACACGTGCGAATTGGACAATGACTCAGCTATACACTTACATCAGATT AGCACCAGAGGACACCTTACCTTTAAAATGCTATTGCTCAGGACACTGCCCAGATGA CGCTATTAATAACACATGCATAACTAATGGCCATTGCCTTTGCCATTATAGAAGATGA Gaps Length 3167; 5 Sequence 3167 BP; 908 A; 647 C; 688 G; 924 T; 0 U; 0 Other; 6; Indels DB 14; Score 1750.4; Pred. The invention relates to a novel isolated antibody, or its antigen-
binding fragment, which binds specifically to a sclerostin (SOST)
CC binding fragment, which binds specifically to a sclerostin (SOST)
CC polypeptide. The SOST polypeptide comprises any of 6 sequences having 190
Cr 213 amino acids, fully defined in the specification (ADX97341,
CC ADX97360, ADX97398, ADX97400, ADX97402 or ADX97408). The antibody
CC competitively inhibite binding of the SOST polypeptide to a bone
CC capable of binding site, where the BMP Type I Receptor binding site and a BMP Type I
Receptor binding site, where the BMP Type I Receptor binding site is
CC capable of binding to a BMP Type I Receptor binding site is
CC capable of binding to a BMP Type I Receptor binding site is
CC capable of standing to a BMP Type I Receptor polypeptide. The invention
C further comprises: a hybridoma cell producing the new antibody; a host
CC comprising the new antibody, or its antigen-binding fragment, and a
CC comprising the new antibody or its antigon-binding perture amino acids of
CC physiological carrier; an immunogen comprising a peptide comprising 6, 7,
CC 8, 9, 10, 11, 12, or at least 21-50 or 20-75 consecutive amino acids of
CC 8, 9, 10, 11, 12, or at least 21-50 or 20-75 consecutive amino acids of
CC 6, 9, 9, 10, 11, 12, or at least 21-50 or 20-75 consecutive amino acids of
CC 6 antibody and compositions are useful accids may be used in gene thersapy. The composition and methods are useful
CC for increasing bone mineralization, which may treat or prevent diseases
CC for increasing bone mineralization, which may treat or prevent diseases
CC conditions associated with low bone mineral density, such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /product= "Rat bone morphogenic protein type I receptor"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Э,
                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes novel human and murine activin receptor-like kinases (ALK's). The novel ALK products can be used in therapy, e.g. to modulate conditions associated with activin or TGF-beta activity, such as fibrosis, e.g. liver cirrhosis and pulmonary fibrosis, cancer, rheumatoid arthritis and glomerulonephritis. The products can also be used for detection, diagnosis and drug screening. This sequence encodes the murine mALK-3 protein isolated from clones ME-7 and ME-D
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          254

receptor kinases identified as activin receptor like kinases (Alks) that are members of the transforming growth factor beta (TGF-beta) superfamily. The present invention describes a method for identifying TGF-beta inhibitors by determining whether a substance inhibite binding of TGF-beta to Alk-1, in particular where that substance is an antibody that binds to TGF-beta or the extracellular domain of Alk-1. The proteins having specific serine/ threonine receptor kinase activity can be used in therapy to modulate activin or TGF-beta activity and as such can be used to treat liver cirrhosis and pulmonary fibrosis, cancer, rheumatoid arthritis or glomenilonephritis. Accordingly, they exhibit hepatotropic, antiinflammatory, respiratory-Gen, cytostatic, antirheumatic, antiarthritic and nephrotropic activities. This polynucleotide is the murine ALK CDNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                GCTGGTTGTGCTCATTTCCATGCTGTGTATAGTTGCTATGATCATCTTCTCCAGCTG

The inventors have identified a new family of receptor kinases called activin receptor-like kinases (ALK). Their discovery was based on the realisation that receptor serine/threonine kinases form a new receptor family, which may include the type II receptors for other proteins in the transforming growth factor(TGF) beta superfamily. The activin receptor type II sequences from muuse and the dafi gene product of C.elegans have high sequence similarity and were used to design degenerate primers to clone related cDNA's (see AAQ66643-49). Six distinct putative receptor serine/threonine kinases (ALK 1.5, 4, and 6 are AAQ66639-42 respectively) are identified chalk.3 was obtained from a mouse lambdaEX lox cDNA ilbrary using hALK-3 cold a probe. Two overlapping clones were identified that together covered the complete sequence of mALK-3. CP Products of the invention can be used in therapy, ey. to modulate conditions associated with activin or TGF beta activity. These conditions include fibrosis, eg. liver cirrhosis and pulmonary fibrosis, cancer, theumatoid arthritis and glomeronephritis. (Updated on 25-MAR-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ب

                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                          New bone morphogenetic protein receptor kinase protein - used for identifying cpds. capable of binding it and for developing therapeutic cpds. and detection {\rm system}(s).
                                                                                                                                                                                                                                                   A cDNA library prepared from NIH3T3 poly-A RNA was screened with J159 fragment to isolate clone BRK-1 (sequence given in AAQ90184) encoding full-length BNP receptor kinase protein (AAR74343). Vectors including DNA were used to express recombinant BRK-1 in CHO and COS-7 hosts. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence encodes mouse bone morphogenetic protein (BMP) receptor type -I kinase-1 (BRK-1), which induces cellular differentiation in response -I bare gene may be inserted in plasmid pJT4, to form plasmid pJT4-J159F, and co-expressed with a type-II BRK-3 gene to study complex formation between the 2 receptor types. The BRK-3 receptor and antibodies against it may be used in diagnostic assays for BMP disorders, or in therapy to bind or scavenge BMPe. In addition, expression of the BRK-3 gene along with a reporter gene under the control of a hormone-responsive element in a cell culture may be used to screen compounds for BRK-agonist or -antagonist activity, by monitoring reporter gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 110

```
A cDNA clone (AAT28021) codes for full-length mouse bone morphogenetic protein (BMP) type I receptor kinase protein-1 (BRK-1) (AAR95225), a receptor capable of binding BMP and transducing a signal initiated by the binding. Host cells co-transfected with vectors carrying full-length, incomplete or soluble BMP type I receptor kinase protein cDNA and full-length, incomplete, soluble or truncated BMP type II receptor kinase protein-3 (BRK-3) cDNA (see also AAT28018-20 and AAT28022-30) express a BMP receptor complex useful for screening cpds. for BMP receptor affinity or for determining the concentration of a BMP receptor ligand in a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This cDNA encodes a mouse BMP receptor kinase protein (BRK)-1. This can be used in the method of the invention of determining whether a compound can bind to a bone morphogenetic protein (BMP) receptor kinase protein complex. The method comprises allowing a compound in a sample to bind to the complex, where the complex is comprised of (i) a BMP; (ii) a BRK protein; (iii) an ActRIBE receptor. The method can be used to determine the concentration of a BMP receptor ligand in a sample by comparing the binding to a standard curve prepared with known concentrations of BMP ligand. The method can also be used to determine whether a test compound produces a signal on binding to a BMP receptor protein complex. The method is useful for determining whether a ligand, such as a known or

                                                                                              PCR primers (given in AAQ90186-89) based on unique sequences present in activin and DaF-1 receptor kinase domain VI were used to amplify cDNA derived from NIH3T3 cells. A 3100 bp PCR fragment obtd. was used to screen a cDNA library prepd. From NIH3T3 cells in lambda ZapII to obtain clone 159 contaning DNA (AAQ90183) encoding truncated BRK-1 (AAR74342). Vectors including the DNA were used to express recombinant tBRK-1 in CHO and COS-7 hosts. (Updated on 25-MAR-2003 to correct PN field.)
